<b>*Average: average of non-zero values for 24 years</b>																	
<b>2005 Notes</b>	6 counties which reported in 2005 did not report in 2006 & no data on T, E, H from Merced Co. in 2006																
<b>2006 Notes</b>	No data on T,E, H from Ventura or Merced Cos.in 2005																
<b>2007 Notes</b>	172 trails reported. Few major producers reported results																
<b>2008 Notes</b>	228 trails reported but several major producers did not report																
<b>2009 Notes</b>	265 trails reported - nest tries down but fledges up? Major producers from 2008 did not report																
<b>2010 Notes</b>	Nest Tries underestimated as many large producers did not provide bob-by-box detail; each species was reported as 1 box in these cases. Large increases in boxes, eggs, hatchlings and fledglings are primarily the result of Merced county reporting after a lapse of several years																
<b>2011 Notes</b>	Nest Tries underestimated as many large producers did not provide bob-by-box detail; each species was reported as 1 box in these cases. Ditto - boxes. All ratios based on nest tries or boxes are low as a result.																
<b>2012/2013 Notes</b>	Nest tries and boxes much more realistic this year - accounts for large change in related ratios Based on trail results not box-by-box results																
<b>2014 Notes</b>	Reductions from 2013 are almost entirely explained by the illness of Dick Purvis, Orange County.																
<b>2015 Notes</b>	results are down 10% from pre-drought years (2010-2012)																
<b>2016 Notes</b>	results are slightly up from last year																
<b>2017 Notes</b>	results are similar to 2016; because of the rain in 2016/2017 I had expected much higher results																
<b>2018/2019 Notes</b>	results are similar to 2017
